Workshop - All Together Now – Live Discussion

Objectives and General Organization

In an interactive format featuring live discussion, this workshop addresses key topics in daily practice: SGRT, multimodal imaging, hybrid dosimetry, and verification protocols. The goal is to promote the sharing of experiences among departments and to collaboratively develop practical recommendations that will be presented during the results session.

1. SGRT Implementation: Safety and Clinical Optimization
2. Multimodal Imaging: CT, MRI, and PET
3. Hybrid Dosimetry: When It Influences Clinical Decision-Making
4. IGRT Verification Protocols: Analysis and Decision-Making

To ensure that groups are organized in a balanced manner and to promote genuine knowledge sharing, each participant must, **upon registration**, list their order of preference for the workshops mentioned. To guarantee enrolment in the preferred workshops, the scientific committee will assign participants according to their choices.

Each participant may attend only one workshop.

The number of participants in each workshop may vary depending on individual choices and the capacity of the designated venues.
